Business Requirement Document (BRD) Superstore Sales Dashboard

1. Objective

To develop an interactive Tableau dashboard that provides a comprehensive view of sales, profit, and operational performance.

Enable stakeholders to monitor KPIs and identify trends, opportunities, and problem areas.

2. Dashboard Overview

The dashboard visualizes sales and profit trends over time.

It includes breakdowns by Region, Category, Sub-Category, and Customer Segment.

Interactive filters allow dynamic exploration of data.

3. Key Business Questions

Which regions are driving the highest sales and profit?

Which product categories and sub-categories are underperforming?

How do sales and profit trend over time?

Which customer segments contribute most to revenue?

4. KPIs Displayed

Total Sales

Total Profit

Profit Ratio

Total Orders

5. Insights Expected

Identify high-performing regions

Highlight loss-making sub-categories

Compare profitability across categories

Understand customer segment contribution

6. Functional Requirements

Time-series charts for Sales and Profit trends

Bar charts for Category and Sub-Category analysis

Map chart for Regional performance visualization

Donut Chart for Segment-wise comparison

Interactive filters for Region, Category, and Segment

7. Data Source

Superstore dataset (Excel file provided)

Includes Orders, Sales, Profit, Customer, and Shipping details

8. Tools & Technology

Tableau for dashboard development

Microsoft Excel as the data source

9. Success Criteria

Dashboard is interactive and user-friendly

Insights are clear and actionable

Supports business decision-making effectively
